

Torrey Pines

State Reserve and State Beach

Our Mission

The mission of the California Department of Parks and Recreation is to provide for the health, inspiration and education of the people of California by helping to preserve the state's extraordinary biological diversity, protecting its most valued natural and cultural resources, and creating opportunities for high-quality outdoor recreation.

*“Visit Torrey Pines...painted
cliffs and rugged canyons...
green groves and flowered
hillside...the wonderful
panorama of mountains...
the sweeping shoreline and
the blue sea...will continue
in its primitive beauty to
be admired and loved by
all who visit it.”*

—Guy Fleming

T

Torrey Pines State Reserve is a majestic wilderness in the middle of an increasingly urban area. Its fragile environment of high, broken cliffs and deep ravines overlooking the sea is home to one of the world's rarest pine trees—*Pinus torreyana*. The Torrey pines are believed to be the remnants of an ancient woodland that once flourished along the southern California coast, but now they grow naturally only on this small strip of San Diego coastline and on Santa Rosa Island. Here, the tree clings to the face of the crumbling sandstone or stands tall in sheltered canyons.

Torrey Pines State Beach, adjacent to the reserve, stretches four and one-half miles from Del Mar past Los Peñasquitos Lagoon to the base of the sandstone cliff at Torrey Pines Mesa. The sandy beach invites

swimming, surfing, fishing and picnicking. Low tide—when the red-tinged bluff is reflected in wet sand—is a good time to stroll the beach. Across the highway from the beach, the Los Peñasquitos Marsh Natural Preserve provides a protected breeding ground for many species of birds and fish.

PARK HISTORY

Human History

The Kumeyaay that lived at Torrey Pines traveled in bands of extended families throughout the coast, mountains and desert foothills. Their lands extended from the Pacific Ocean, south to Ensenada, Mexico, east to the dunes of the Colorado River, and north through the Warner Springs Valley to what is now Oceanside. They lived in small dwellings

and shade ramadas which were made of willow, oak, manzanita, deerweed, tule, chamise and other local plants.

The Kumeyaay were seasonal hunters and gatherers. They gathered roots, berries, nuts and seeds—some of which were used for medicinal purposes—and practiced limited horticulture. Using fishhooks and nets, they caught a variety of sea animals, and picked up grunion, shellfish and mollusks from the beaches. The Kumeyaay hunted such game as rabbits, quail and deer with bows and arrows, throwing sticks and snares. Today, descendants of the Kumeyaay still reside in many of the same areas, including San Diego County.

NATURAL HISTORY

The landscape of the reserve is still changing. Nearly a million years of rising and falling seas, heavy rains, and erosion by streams and creeks gradually formed the sandstone terraces that make up the present reserve. Some geological formations are more than 45 million years old, and some rocks have traveled from as far away as central Mexico. The continuous motion of the surf creates a changing seascape, challenging artists and photographers to record its latest look. Varying elevations have produced habitats that range from salt to fresh water, from coastal strand to sage scrub, from salt marsh to chaparral to riparian. The area's mild temperatures range from a January low of about 45 degrees to a typical August high of between 75 and 80 degrees. In June and

Torrey pine on coastal bluff

July it is not uncommon for coastal fog to last all day, enabling the Torrey pines to survive in this unlikely environment.

THE TORREY PINES

Early Spanish explorers named the grove of trees in the area *Punto de Los Arboles*, or “Point of Trees.” The trees served as a landmark for sailors navigating off the coast. In 1850—the year of California’s statehood—botanist Charles C. Parry identified this pine as a unique species and named it after his friend John Torrey, a leading botanist of the time.

When Dr. Parry returned to the area in 1883, he was distressed over the lack of protection for the trees, and he urged the San Diego Society of Natural History to save them from extinction. By 1885 there was a \$100 bounty on anyone caught vandalizing a Torrey pine tree. Possible later threats included clear-cutting the trees so the land could be used for cattle grazing. In 1899 the San Diego City

Council passed an ordinance that set aside 369 acres to be used as a public park.

Concerned newspaperwoman and philanthropist Ellen Browning Scripps donated the North and Parry Groves to the people of San Diego in the hope of protecting the Torrey pines. In 1916 Guy Fleming, a botanist working for the San Diego Society of Natural History reported damage to the trees by heavy public use.

Miss Scripps got the public interested in protecting the trees, and in 1921 she and the City Park Commission appointed Mr. Fleming custodian of Torrey Pines Reserve. By the time of her death in 1932, Ms. Scripps had contributed significantly to the establishment of the reserve.

THE RESERVE

The 2,000-acre reserve’s setting today contains approximately 300 endangered and protected species of native plants. The plant communities of the reserve and lagoon areas include coastal strand, coastal sage scrub, chaparral, and Torrey woodlands. These vanishing habitats are home to sand verbena and beach primrose in the coastal strand areas, as well as California sagebrush, California buckwheat,

black sage, and coastal barrel cacti in the coastal sage scrub community. The mesas and other high elevations are host to the chaparral community of plants, including chamise, manzanita, ceanothus, California scrub oak, toyon and mountain mahogany. The Torrey woodlands are defined by the generally poor soil and arid climate that cause the trees to have extensive root systems. The trees take on a variety of shapes as dictated by the elements—dwarfed and gnarled where most exposed to wind and salty air, or taller and more upright in sheltered areas.

NATURAL PRESERVES

Two outstanding areas have been designated as Natural Preserves by the State Park and Recreation Commission. Ellen Browning Scripps Natural Preserve is the area around Parry Grove and Guy Fleming trails. Los Peñasquitos Marsh Natural Preserve is one of the last remaining salt marsh areas and waterfowl refuges in southern California. The area is home to several rare and endangered species of birds and provides a vital stopping or nesting

Sandstone cliffs

place for many migratory waterfowl. Portions of the reserve may be closed at times to allow the natural features to recuperate from abuse, overuse or natural disasters.

WILDLIFE

The intertidal zones are rich in sea life: limpets, shore crabs and hermit crabs, mussels, barnacles, sea anemones and various species of snails and shells. High above the sea, the bluffs offer excellent vantage points to watch the annual

migration of gray whales. Dolphins, seals, sea lions and several species of porpoises may be seen year-round.

About two hundred species of birds are protected at the reserve. Shore birds include brown and American white pelicans, black-bellied and snowy plovers, several species of gulls and terns, American avocets, western sandpipers, willets, whimbrels, sanderlings, great egrets and longbilled curlews. Farther inland western scrub jays, California quail, brown towhees, sparrows, Nutall's woodpeckers, Anna's

Wildflowers are common.

hummingbirds, ravens and mockingbirds are often found. Here brush rabbits and other small rodents are common, with occasional gray foxes, bobcats, coyotes, and mule deer. Reptile residents include rattlesnakes and a variety of other snakes, and several species of lizards, including the endangered horned lizard.

RECREATION

Trails

- 0.6-mile Guy Fleming Trail in the North Grove offers two scenic overlooks with panoramic views. This trail has the greatest variety of wildflowers, ferns, cacti and pine trees in the reserve.

Brown pelican

Visitor Center (Lodge) and Museum

- 0.4-mile Parry Grove Trail has dramatic ocean views, but most of the mature Torrey pines fell victim to a bark beetle infestation in the mid-1990s. A controlled burn has allowed natural revegetation and spectacular seasonal wildflowers. Steep stairs form the head of this trail.
- 0.1-mile High Point Trail offers a 360-degree panoramic view of the reserve and ocean.
- 0.7-mile Razor Point Trail meanders through coastal sage scrub, spectacular views of sculptured sandstone, gnarled trees and the surf 150 feet below. Yucca

Point Overlook, accessed from both Razor Point and the Beach Trail, features dramatic yucca flower displays in spring and stunning examples of sandstone erosion.

- 0.75-mile Beach Trail is a rustic footpath through the upper reserve to the beach 300 feet below.
- 1.3-mile Broken Hill Trail offers a beautiful view of eroding sandstone, and its north fork leads through Elfin Forest before connecting to the Beach Trail near Flat Rock.
- 1.5-mile Marsh Trail goes along the southern edge of Los Penasquitos Marsh Natural Preserve. The trailhead is on the east side of North Torrey Pines Road opposite the South Beach parking lot.

Trails in the Extension

- 0.5-mile Mar Scenic Trail follows the seasonal creek through the extension.
- 0.5-mile Daughters of the American Revolution (DAR) Trail offers views across the marsh to the main reserve and to the ocean.
- 0.75-mile Margaret Fleming Nature Trail is a scenic walk through coastal sage scrub.
- 0.3-mile Red Ridge Loop Trail offers views of the lagoon, the main reserve, and the Carmel Valley.

Coastal horned lizard

INTERPRETIVE SERVICES

- The visitor center (Lodge) features exhibits on local wildlife, flowers and geology, and offers a selection of interpretive publications.
- Free trail maps are available at the visitor center or at most trailheads.
- The park has a native plant garden at the front of the visitor center, and another (the Whitaker Garden) at the Parry Grove trailhead.

Torrey Pines State Beach

- Call for information on school group activities and a teacher's guide.
- Information on park programs is available from the visitor center. Make group program requests at least two weeks in advance.
- Docent led nature hikes for individuals and families are scheduled between 10:00 a.m. and 2:00 p.m. on weekends and holidays (call to confirm).

ACCESSIBLE FEATURES

- Visitor Center is generally accessible. Captioned video available. Nearby parking and restroom are accessible.
- South Beach restroom and parking are accessible. Slope of path from lot may require assistance.
- North Beach parking, restrooms and path to beach are usable with assistance.
- A beach wheelchair is available.

- Visitors with service animals should contact park staff upon arrival. Accessibility is continually improving. Call the park for the latest information.

This park is supported in part through a nonprofit organization. For more information contact:

Torrey Pines Docent Society • P.O. Box 2414
Del Mar, CA 92014-1714 • (858) 755-2063

NEARBY STATE PARKS

- Cardiff State Beach, one mile south of Cardiff on old Highway 101
(760) 753-5091
- Old Town San Diego State Historic Park, San Diego and Twiggs Streets
(619) 220-5422
- San Elijo State Beach, in Cardiff on old Highway 101
(760) 753-5355/5091
- Carlsbad State Beach, in Carlsbad
(760) 438-3143

PLEASE REMEMBER

- Stay on the trails. Walking off trail causes erosion, tramples plants and frightens animals.
- The cliffs are unstable and dangerous. Children must be supervised by an adult at all times.
- State laws protect all features in the reserve, including rocks, artifacts, flowers and pinecones.
- Picnicking is only permitted at the beach, not in the reserve or on the trails (water canteens are okay). Place all trash in receptacles provided.
- Smoking is only permitted at the beach.
- Fires are prohibited. Personal portable barbecues are permitted only on the beach. Place hot coals in the hot coal containers provided.
- Dogs and horses are prohibited at the reserve and on the beach.
- All types of vehicles are prohibited on trails; bicycles may use only paved roads.
- Due to the sensitive ecological environment, it is occasionally necessary to limit the number of visitors by limiting the number of vehicles in the park. If the reserve is full, visitors may be asked to check back later or plan to visit another day.
- Park only in designated lots. Stopping on road shoulders is not permitted.
